Water the blue gold of the future

the potable water supply in Spain represents a giant problem for the authorities and a solution is not in view. The consumer must cover already now the largest need by purchase of „filled up water “. Despite high prices in the trade (0.60€ - 0,90 €/1.5 l) it constantly comes to delivery bottlenecks, in the special one in „the water-poor “regions of Spain. The need must predominantly from Katalonien - are where nearly 70 per cent of the hundred Spanish well enterprises - or from the European. Foreign country over far distances to be delivered.

Net yield expectations of the objects specified down, is attached 15. Mill. euro object/year Under consideration of the high pouring and the permitted extraction quantities of at least 5 l/Sekunde the annual production can be about 150 Mill. bottles and more, which results in the managing calculation in the case of the Spanish price structure - for comparable water - in the markets. The consumer behaviour of the Spaniards changed itself in the last 5 years relative consumption of mineral waters enormously and lies today with annually 130 l/Kopf. with steeply rising tendency.

The few investment possibilities on the mineral water sector we present and send to you below briefly you when desired gladly closer documents. We are exclusively assigned the switching. According to information after their knowledge no further objects are offered to the Spanish well combination.
