Look for Corporate co-operation, firm cooperation

Heat exchanger - steam vessel - international business

We are looking for a cooperation with a company coming from the sector of steam generators. Our patented product changes steam into electric power. A huge business field is the waste heat in the industry. We need a partner to develop together with us the interface to collect the thermal energy in exhaust systems (usually 200 - 800°C) and convert it to steam (120 - 200°C). Our innovative machines recover this thermal waste into 10 - 500 KW electric power. If you are able to invest in this development, and if you are ready to start the global implementation and maintenance please contact us.

Co-operation

Region 68, Germany

Entry in own name
