

## Look for Corporate financing, investor **Prototyping**

I am Looking for an Investor for my Project, which I would like to introduce briefly here: I want to print my Lion, which was designed using a well-known 3D software, on a 3D Printer and then pour it into Gold.

The artistic Aspect behind this is that Animals are realistically depicted and staged. That means, in the Lion's Example, that he is up in an Attacking position and trying to defend himself. In Combination with the anatomically realistic Representation, the Figure would be something really special as a Sculpture cast in Gold.

What Is special about this is the Fact that so far no Sculptures have been cast that are as detailed and have an excellent Surface quality as mine.

Furthermore, casting a complex Figure in 24 carat gold Would be a Novelty that no one has yet "dared to do."
