Energy Generation Wood electricity Generation

Burn Your Money, chase it through the Fireplace ... Best through a Silent involvement in our Biomass Power Plant.

We want to expand our ongoing Project and build another Wood chip power Plant. The gas uses CHP Engines that produce ELECTRICITY and Heat. The Electricity is remunerated according to the EEG, the Heat is taken from the Municipality. Excess Heat is in turn turned into Electricity via innovative Post-electricity Generation.

We are looking For a silent Interest, which is interested in a safe and stable Return. We guarantee that Your Money will also be burned. Just we'll get it back.
