Drying System for Natural Stone refining

Prehistory: Natural Stones (Granite and Marble) very often have Cracks and Magnapes, so natural Stone Businesses have a Loss of up to 60% for some Stones. This Loss can be reduced to up to 2% by appropriate Measures, which alone means Billions across Germany. Appropriate Measures are usually Resins in Conjunction with a Drying System. On the international Market, Drying Plants are very expensive to Purchase and Maintain. The Result of such Plants is usually only satisfactory.

The Idea: A Drying System that can be built very individually depending on the Customer'S wishes and works very inexpensively and effectively through other Drying Processes and special Parameters.

Implementation: We have invested a lot of Money in the development and Construction of a Prototype over the last 8 Years. This System is completed by our Partner and is already operating almost flawlessly.
