Production of seawater desalination plants

Water supply

Drinking water from seawater

Wastewater treatment

For reuse with recyclable material production We have developed a technology that, through physical processes from highly polluted industrial wastewater, is once again making clear water using the utilization of recyclable material recovery, without chemicals. In addition, it is possible to extract drinking water and salt from seawater. As a result, this technology can be used at a very low cost worldwide. No other method comes close to this technology.

Fresh water extraction, hydrogen extraction and the treatment and desalination of seawater and brackish water. It consists of 4 techniques for fresh-bated seawater treatment as well as an innovative membrane technology with, among other things,
