## Offer Corporate follow-up, firm follow-up, follow-up **Manufacturer flow measurement technology**

We are manufacturers of innovative flow measurement technology for mass or volume current measurement of steam, gases, and liquids, with significant unique characteristics and relatively high profile. We have TA-air approval for smoke and exhaust fumes. 17. BImSchV. The company's own service takes place all over the world.

For reasons of age, the GmbH was kept small, but without an acquisition by regular customers and only with the managing director, we achieve an annual turnover of more than > €300,000,-, whereby we make a very high cost recovery contribution. Although we have our own production with our own machines, the work is carried out by our highly qualified TÜV-tested welder in temporary work. As a result, the slim company is very profitable.

The company is debt-free and has great potential for growth.
