Look for Corporate financing, investor **Energyball**

The unique wave and motion power plant, the construction of which proves to be very inexpensive, responds to every movement, the sea wave energy optimal and can generate electricity 365 days a year even at the smallest movements.

The low-cost sea wave energy available in any quantity causes the total energy demand from these renewable sources to be met at the same cost as from conventional fossil and nuclear energy.

Its maintenance-free design makes it ideal for the sea and already patent pending.

Electricity from ocean waves can solve the world's energy problems and get a grip on the climate catastrophe caused by oil, natural gas and coal.

We are looking for investors who invest in a unique invention to get the prototype ready for production. Prospective customers from 1 million, 00 Euro are welcome.

You will be involved in the parent company and this will be kept on the stock exchange.

If you are interested, we look forward
