Biogas plant

Biogas plant 120 kw under 14-year remaining contract to the grid (price per kw: 0.209 euro-24hrs*120kw*0.209€/kwh*80%efficiency?480€/day). The plant is situated in an owned 5300 m2 field just next to the public power corporation plant in Ag Dimitr, , Greece. The plant is built at just about half of the field for future expansion in power with a second generator (with a small cost-at the same kW price up to 3 MW) given the advantage of having two digesters tanks already or other activity (e.g. greenhouse). Main building 160 m2, cummins engine/ camda generator 120 kw (with engine service parts available when actually needed in stock by a service engine company in Greece), two digesters of 675 m3, liquid/solids seperator, two temporary storage tanks 280 m3 and 150 m3, gas filtration, loader, feeding tank 15 m3 and 80 m3, temporary feeding tank 13 m3, weighbridge and several machinery and parts (steel tank, pelletizer, air compressor, drum filter, engine parts, pumps, etc). The plant is eligible and already participated in EU funded research programme (significant funds already have been paid - also applied for another one) with an important team of universities, private companies and local consultants for innovations and improvements in existing facilities like ours. Easy steady feeding provided by reliable partners with vegetable and animal fats/oils giving very high gas yield and others such as chicken manure, food waste, vegetables etc) providing quality solid and liquid fertilizers.
