Creation of telecommunications management software

We are looking for young dynamic entrepreneurs who would like to expand the telecommunications administration division independently. For this purpose, we transfer both the customer base and the rights to our specially developed software in the telecommunications sector for further development. Due to our age and lack of personnel, we have no opportunity to further expand this flourishing core of the company. It would be a pity if this goal were not pursued. Of course, we will continue to provide advice.
