Offer Corporate participation, firm participation
Event software

It offers a system house with more than 20 years of industry experience with the development of standard software, IT consulting and services for events and trade fairs. Sales rose steadily by 15% and currently exceed one million EUR p.a.

There is great growth potential due to the high scalability of the software products, as well as the constant increase in the proportion of digitization in service and internal processes as well as the expansion of international partner management.

The current challenge is to internationalize the software in order to market it in Europe and then worldwide. In order to initiate these steps, a strategic investor is being sought for a 50% stake.

Integration into existing business models or by bringing in an existing international customer network would be negotiable options.
