Distribution of recycling plants

We offer you a company participation in our company for recycling plants.
The company has been in existence since and is mainly concerned with the distribution of recycling systems of a highly specialized cooperation company.
After difficult beginnings and the attempt to gain a foothold in Germany, we have now shifted our focus to Asia, Africa and South America.
We have paved the way for this and now need financial support to continue the business.
The plants are unique and can, for example, produce bagasse diesel from sugar cane.
It is also possible to process used tyres, waste oil and plastic.
