Sanitary, heating and air conditioning technology

I am a trained plant mechanic for sanitary, heating and air conditioning technology (specialisation: water technology) and a master plumber/heating engineer.

After my training, I worked as a construction supervisor, and since the master school (part-time) as a project manager in a planning office for technical building equipment.

I am looking for a possibility of company succession in the LÃ¼beck area (or Sauerland). Please send me a short description of the company as well as your contact details.

Thank you very much in advance.
