## Care App

The future of digital care management

Business idea

We have developed an innovative web app for managing and filing care documents. Our goal is to relieve the burden on those in need of care, relatives and professionals through an efficient, safe and intuitive solution. The special added value lies in the possibility of having documents processed by experts in the back office. This guarantees up-to-date and legally compliant documents that can be downloaded and shared at any time.

Market Analysis & Potential

The care industry is growing rapidly, driven by demographic developments and increasing demands on the healthcare system. At the same time, caregivers and relatives are increasingly overburdened with bureaucracy. The need for digital solutions for document management is enormous, especially due to the increasing legal requirements and the desire for more efficient processes.
