## **Rental of Lifting and Installation Equipment**

A specialized company in the field of lifting and installation technology is being offered for sale, with a strong focus on the rental and sale of equipment for glass installation, vacuum handling systems, and complementary machinery solutions for the construction industry. The business has been active on the market for several years, is economically stable, and operates with a lean, digitally supported business model.

In addition to equipment rental, the service portfolio includes technical consulting and accessory provision. The customer base primarily consists of commercial clients in the glass and façade construction sectors. A modern rental fleet with high-quality equipment owned by the company, combined with proven operational workflows, ensures efficiency and customer satisfaction.

The company generates stable revenues with further growth potential, particularly through the expansion of its machinery inventory, digital sales channels, or regional development. The succession process can be arranged flexibly—either through full acquisition or entry via partial ownership. A structured handover and onboarding phase will be provided.
