Adhesive tape production

Our company has specialised in producing high-quality masking films and masking material for the professional trade since 1980. We produce entirely in the Stuttgart region.

The infinitely extendable masking film for windows is unrivalled on the market. Plasterers, painters and the construction industry use this masking film to protect windows and doors when renovating or building. The masking film is a proprietary development that is produced on a specially built machine, the only one of its kind in the world!

The priority in our company is of course the quality of our own products. We are able to offer top products thanks to our close proximity to our reliable raw material suppliers, all of whom also produce in Germany. We produce our double-sided adhesive tape ourselves and thus ensure that the quality of the subsequent processing is guaranteed! Another aspect of quality assurance is the frequent dialogue with our customers. This input enables us to continuously improve our products.
