Plastic Beverage Closures Licens-patent Marketing

We have developed a typical Consumer product-which is taken into Our hands on a daily basis worldwide,

- which costs between 0.5 and 1 Euro cents,
- of which about 170 Billion Pieces are consumed each year,
- because we have more than 50 relevant patents, intellectual Property rights and Intellectual Property Applications Worldwide
- and its Use is almost prescribed by The legislature on the basis of the producer liability legislation: A Bottle closure.

For Decades, Bottle Caps had to be able to do only one thing: Close safely and gastight-nothing else.

We take our Development one decisive Step further: In Moments of danger due to too high Internal pressure in the Bottle, these Closures briefly blow off the Overpressure and close again safely and gastight when Reaching the desired normal internal pressure.
